

Aldel's Packing Plate and Retainer for the Power Feed Work Holder

The packing plate brings the face of the Power Feed Work Holder out slightly in front of the router table fences. T-bolts add a measure of security when mounting the work holder.

- * Slide the T-bolts into the lower t-track on the Sliding Bar.
- * Slip the packing plate over the T-bolts.
- * Slide the Power Feed Work Holder plate over the T-bolts. Make sure the locating pins are in place on the back of the plate.
- * Secure the plate between the fix and moving fences with the cam as well as with knobs and flatwashers installed on the T-bolts.

Note: The Power Feed Work Holder can also be used on the WoodRat although the holes for the T-bolts may need to be drilled in a different position.
